

Weekly Market Review November 29, 2024

Overview

The impacts from Hurricane Helene and Milton are expected to be felt across the entire Southeast through the end of the year and as we approach the Holidays, we continue to keep those in harm's way in our thoughts and prayers. We expect to see supply of fresh produce from South Georgia and Florida to be extremely volatile; in Florida it's too soon to assess all the damage to crops and infrastructure that were severely impacted. Commodities certain to be immediately impacted are the following: Citrus, Corn, Cotton, Tomatoes, Soft Squash, Bell Pepper, Eggplant, Peanuts, Pecans, Mixed Hot Pepper, Greens, Cabbage, Strawberries and Green Beans, to name a few. As of today, we are seeing some growers reporting total losses and declaring Act of Gods, some growers are projecting to salvage less than 30% of their crops, and some will replant. Needless to say, the next 5 to 6 weeks will be incredibly challenging with record high pricing, poor quality and limited availability. Current table grape supply out of California continues to dwindle and should be done by the end of the month, some shippers sooner than others. We could see GAPS supply over the next several weeks on the West Coast as most of the offshore fruit on the front end of the season loads in the East. This should start to improve by Late December as more offshore fruit fills the supply chain. Pineapples continue to be short, and shippers are asking to be flexible on sizing to navigate the shortfalls. In the West, tighter supply available to market on mushrooms; weather impacts and viral pressure have caused supply shortfalls across the region on all varieties. Growers are hoping this will improve over the next five weeks. Avocado demand for fruit remains higher than expected and volumes are just lighter due to the holiday in Mexico last week. The size curve continues to favor the 60s and smaller, but instead of larger fruit coming down in cost to narrow that pricing gap between 48s and 60s, the smaller fruit is increasing to catch up to the larger. Growers are now harvesting on the larger sizes. Last week, vessels experienced delays in both entering and leaving Guatemala for shipments, but these issues are expected to be resolved soon. However, the weather conditions in Guatemala have improved following the passage of Tropical Storm Sara through the area. Transition is winding down, but we are continuing to see short supplies and escalating markets. The damage from the heat in Yuma and Salinas left lingering issues and we will most likely feel those effects until the end of the year. Broccoli is still very tight and will likely be prorated. While the heat negatively affected the broccoli market, the cold weather will now slow growth and make the market even worse. Growers are doing their best, but you can expect broccoli to be an issue for at least a few more weeks. The weather in Yuma was very hot when the early planting was done, so some of the earlier crops in Yuma were affected. Some growers had to replant. That has been one of the factors in the yields continuing to be low as we move to Yuma. Endive, escarole, leeks, cilantro and fennel are still escalated and look to remain that way through the year. Bok Choy, Broccoli, Cauliflower, Iceberg, Romaine, Spring Mix and Artichokes have stayed at the extreme trigger. These items will be held to averages. All these items are all very light in supplies. Growers will be holding to averages and it is very likely that you will see prorates. Spring mix and spinach have suffered significantly lower yields due to a wide range of issues, including insect damage, mildew, external burn, leaf miner and thin texture. Spring mix only escalates when the whole industry is having supply issues and that is

exactly what we are experiencing right now. Broccoli is also still very tight, and most growers are continuing to hold to averages. Green cabbage and Brussel Sprouts will be escalated into December. Supplies will be very limited to all cabbage items and Brussel Sprouts are in higher demand with the holidays approaching and some supplies are starting to be tight on supplies. Between transition, the aftereffects of the heat and Diamondback moth, and now the cold weather is moving in, Transition is going to continue to be rough. Lastly, with some growers still loading out of Salinas and Yuma, there will be transfer fees on some items with some growers. This is normal and happens each year during Transition. Please be aware that you may see some of these fees if you are loading in one location and not all the items have been transferred over to the new location yet. Most growers are in Yuma now, but we do still have a few growers still in the process with some items and some items are still being transferred. Things are starting to look a bit better, but it is going to take everyone a while to get back on track with all the issues that the industry has faced these past few months.

Market Alert List

- ***Asparagus – ESCALATED***
- ***Artichokes – EXTREME***
- ***Avocados – ESCALATED***
- ***Arugula – EXTREME***
- ***Bell Pepper (Green) – ESCALATED***
- ***Bok Choy – EXTREME***
- ***Broccoli, Florets and Crowns – EXTREME***
- ***Brussel Sprouts – ESCALATED***
- ***Cabbage-Green – ESCALATED***
- ***Cauliflower – EXTREME***
- ***Celery – EXTREME***
- ***Corn – EXTREME***
- ***Endive and Escarole – ESCALATED***
- ***Fennel, Anise – ESCALATED***
- ***French Beans – ESCALATED***
- ***Green Beans – ESCALATED***
- ***Hot Peppers (Yellow Caribe, Habanero, Shishito) –ESCALATED***
- ***Leeks – EXTREME***
- ***Lettuce, Boston – EXTREME***
- ***Lettuce, Iceberg and VA Blends – EXTREME***
- ***Lettuce Romaine, Romaine Hearts and VA Blends –EXTREME***
- ***Mushrooms – ESCALATED***
- ***Napa – ESCALATED***
- ***Parsley (Italian & Curly) – ESCALATED***
- ***Pickles – ESCALATED***
- ***Pineapple – ESCALATED***
- ***Spinach – ESCALATED***
- ***Spring Mix –ESCALATED***
- ***Salad Mixes (Heritage, Arcadian Tuscan, Etc.) –ESCALATED***
- ***Strawberries – ESCALATED***
- ***Table Grapes – ESCALATED***
- ***Tomatoes (Rounds, Romas and Snacking Tomatoes) –EXTREME***

Watch List

1. ***Broccoli***
2. ***Cabbage - Red***
3. ***Eggplant***
4. ***Ginger***
5. ***Snow Peas & Sugar Snap Peas***
6. ***Soft Squash***
7. ***Melon – Cantaloupe and Honeydew***

Fruits & Vegetables

Avocados: ESCALATED Total industry inventories for week 47 were reported at 46.5M pounds. U.S. arrivals for week 48 are projected at 53.2M pounds. The industry continues to transition to Michoacán's Main Crop, harvesting about 88.5% Main Crop and 11.5% Off-Bloom Crop last week.³ In the field, availability is stronger on small sizes, and sizes 40 and larger are in tighter supply. However, the industry continues to focus harvest on larger sizes. The Main Crop currently has a dry matter estimate of 27.8%. The market remains strong overall. Current inventory levels are much lighter than typical for this time of year, as reduced harvests and limited packing hours keep supplies tight. Demand is high for all sizes, and prices are increasing. The industry continues to see a large price gap between large fruit and small fruit due to the current size curve. However, with the high demand expected in December for holiday promotions, prices are expected to continue to increase in all sizes.

Bananas: Supply remains stable at the moment and shortages were averted as the strike has been postponed. Over quality remains good across the country.

Pineapples: ESCALATED Supply will remain very light for the foreseeable future due to harvest shortfalls; we need to be flexible on sizing as 5-6ct fruit is very short with 7-8's plentiful. The need to be flexible on sizing may be necessary to maintain consistent supply. Quality is good.

Table Grapes: ESCALATED Current table grape supply out of California continues to dwindle and should be done by the end of the month; some shippers sooner than others. The greens will be out first. We could see supply GAPS over the next several weeks on the West Coast as most of the offshore fruit on the front end of the season loads in the East. This should start to improve by Late December as more offshore fruit fills the supply chain. Quality will be mixed for the next several weeks, we will see elevated shatter, amber in any lingering greens in the market and shorter shelf life.

Berries

Strawberries: ESCALATED Production out of Watsonville/Salinas season has officially ended with rainfall over the past two weeks. Santa Maria saw rainfall over the weekend through Monday. Cooler temperatures (upper 50s to mid-60s) and consistent fruit quality. However, defects like green shoulders and button-nosed shapes are becoming more common. Growers prioritized pre-storm harvests to maximize yield, but rain did disrupt some operations and will likely diminish fruit quality, potentially accelerating the season's end. Mexico continues to see mild weather, with highs in the 80s and lows in the 40s. Steady production increases expected through November and December. Quality remains strong, with occasional green tips and small-to-medium sizes. Organic availability is limited. Florida saw a slight cold trend, with daytime highs in the low 70s and nighttime lows in the mid-40s. Light showers have had a minimal impact on volumes. The volume is increasing week after week, though the cold front is slowly ripening. Quality continues to improve.

Blackberries: Out of Mexico, consistent quality with medium-to-large sizing, good sheen, and firmness. Some issues with red cell regression and soft, leaking fruit. Steady volume expected for the rest of the year, with transfers to Texas maintaining freshness. Watsonville/Salinas production has officially ended for the 2024 season.

Raspberries: Out of Mexico, steady volume is expected through November, with strong fruit color, firmness, and size. Crews are addressing occasionally overripe and crumbled fruit. Transfers to Texas will ensure peak freshness. Watsonville/Salinas production has officially ended for the 2024 season.

Blueberries: Out of Mexico, volume and quality are improving, with peak production lasting through December. Minor issues include shriveling and leaking fruit. Out of Peru, harvest is past its peak. Bulk and pre-packed shipments (6oz, pints, and 18oz) will continue weekly through year-end. Quality remains high. Organic options will become available in December. Out of Chile, the northern regions are seeing a decline in volume, but exports will remain steady into December. The quality is excellent, with large sizes, good firmness, and sweet flavor. Arrivals are expected weekly in December, with peak volume in January.

Citrus

Oranges: Quality of new crop Navels from California is still very good with sizing still running heavy to 88s, 113s and 138s. 72's and larger continue to be in light supply but with recent rains in California, we will see the availability of larger sizes slowly improve.

Lemons: Supplies continue to improve from the Desert-growing regions with very good quality. District 1 has started with light supplies. Market is steady.

Limes: The lime market has stabilized. We continue to see a decrease in supply of small fruit as size is peaking on 150's and 175's. Small sizes will continue to be scarce throughout the remainder of Q4. We look for the market to strengthen over the next couple of weeks, especially in small sizes as we move into the month of December. Overall, the quality is good.

Imports/Specialties: California Mandarins have started with very good quality. Grapefruit has started in the Desert growing regions of California. supplies continue to improve. Quality is good. Cara Cara volume is increasing with promotable volume through December. Cara Cara's will start in Mid-December.

West Coast Lettuce

Iceberg: EXTREME-Lettuce supplies are very tight as yields decline along with quality. Most growers are holding to strict averages. We do expect iceberg to continue to be an issue in December. The quality looks okay, but the weights are light. We will be watching out for tip burn, more of a medium size, rib blight and some minor quality issues. Some growers are also seeing some soil borne diseases flaring up. The market is going to stay increased, and we are going to see the normal issues as we finish up transition. Iceberg is likely to be escalated at least a few more weeks.

Iceberg VA: EXTREME – Quality is okay, and supplies remain tight. You will likely see growers holding to averages for the next few weeks.

Romaine, & Romaine Hearts: EXTREME Romaine and Romaine heart supplies have gotten very tight. We are seeing light weights and growers holding to averages. Growers are all seeing lower yields across the valley. The quality looks good, but we have seen some internal burns, along with twisting and ribby leaves from the warmer weather. Quality will continue to be affected by December. The market is escalating and will most likely stay that way well into the Yuma season. There still may be some prorates for another week or so.

Romaine VA: EXTREME Quality is okay, and supplies are very tight. You will likely see growers holding to strict averages and some will be prorating.

Green Leaf and Red Leaf: Overall quality is fair. Supplies have decreased and we are seeing some mildew damage. The heat is hindering harvest and is reducing yields, with potential for wilting and product burning. The Green Leaf and Red Leaf are no longer escalated but supplies are still limited.

Butter/Boston: EXTREME Supplies have gotten very tight and will remain that way into December.

Eastern and Western Vegetables

Green Bell Pepper: ESCALATED Markets remain firm this week with light volume in the East expected for some time due to the impact of Hurricane Milton. In the West, light supply is expected this week and should loosen up next week as the desert ramps up. In Nogales we are seeing light supplies and expect that to improve over the next ten days. Quality is hit or miss.

Color Bell Pepper: Markets were better this week as more volume was available on red and yellow pepper from Mexico as well as the desert. The quality of being packed is mostly good.

Mini Sweet Pepper: Supply stable this week loading in California.

Mixed Chili Pepper: ESCALATED Supplies in general are good across most varieties out of Mexico and California. Jalapeno, Habanero, Serrano and Poblano were lighter this week. Caribes, Fresnos, and Shishitos are the shortest this week. We still expect to supply GAPS in the East due to the weather.

Eggplant: WATCHLIST Tighter supply from all domestic growing regions keeps upward pressure on price; stable crossings in Nogales and McAllen. Quality is good.

Slicer Cucumbers: Good supply crossing through Nogales and McAllen. Domestically, we may see some supply GAPS due to Hurricane Helene and Milton impacting the East Coast. The overall quality is good.

English Cucumbers: Good supply available this week crossing from Mexico. Quality on new crop out of Mexico was good.

Pickles: WATCHLIST Improving supply available crossing through Nogales, the Florida season will be altered due to the impacts of Milton; Supply will be hit and miss over the next several weeks.

Green Beans: ESCALATED Green Beans will be a challenge throughout the entire holiday season. Currently supplies in the east are light due to the different storms that have hit the growing areas, this week pricing for bushels is in the high 30's and expected to continue to increase daily. Shippers expect demand to stay HEAVY over the next 10 days but once the holiday pull starts, they expect to see a decrease in volume upwards of 70% +/- of normal availability. With the severe losses in North and Central Florida combined with the shift in demand to Mexico and the desert we will see major supply issue across the entire country.

French Beans: ESCALATED Production is on an upward trajectory out of Guatemala and is anticipated to keep improving. However, there is a limited supply of French beans from Mexico as a result of weather conditions.

Zucchini/Yellow Squash: WATCHLIST Supply firmed up this week out of Nogales and Florida, Georgia is done for the season. With the transition into full play, limited supply due to cooler weather we expect light supply for the next week. Quality is good in all regions.

Herbs

Basil availability and quality from Mexico are likely to be limited due to cold weather conditions. Additionally, other herbs are anticipated to be impacted by the same cold weather in Mexico. The situation will be unpredictable over the next few weeks.

Melons

Demand for both cantaloupe and honeydew has strengthened even further over the past week due to the desert wrapping up and honeydew crossings in Nogales quickly declining. The majority of the country has transitioned to offshore melons; our shippers are working hard to ensure the shipping delays caused by Tropical Storm Sara last weekend are ironed out. We hope to see these carriers return to a more normal schedule next week following the holiday week. With the volatility over the next several weeks we need to be flexible on sizing and shipping dates to fill orders.

Cantaloupe: WATCHLIST Quality is very nice on the fruit arriving from Guatemala; sizing is primarily 9s followed by 12s and 9Js while brix levels have been mostly in the 12-16% ranges with some higher. Demand is strong right now and is expected to remain high through January as the rain from Tropical Storm Sara has impacted fields in Honduras and Costa Rica which were scheduled to begin harvesting in four weeks. Shippers with fruit from those regions are already advising customers that no promotional pricing will be provided over the next 2-3 months as there is concern with bacteria in fields negatively impacting yields. We will continue to monitor this situation and provide further input in future updates, but we are expecting higher markets to remain in place both in the short and long term.

Honeydew: WATCHLIST Honeydews could end up being even shorter than cantaloupe as Mexican supplies begin to dry up over the next few weeks. Production out of Guatemala has been slow to start and projected to be fairly limited over the next several weeks. Currently peaking on 5/5Js and the quality has been very good on these, the fruit is clean while internally we are seeing brix levels mostly in the 12-14% range.

Watermelon: Lighter supply available and demand is light. Fruit is being harvested from Texas as well as Mexico.

Mixed Vegetables

Artichokes: EXTREME Supplies remain limited and will continue to be tight for the next few weeks. The market is still at the extreme trigger. Growers are holding to averages. Quality is good.

Arugula: ESCALATED The heat caused some issues with arugula and we are seeing lighter supplies. Growers are holding to averages.

Asparagus: ESCALATED Southern/Northern Baja production is still low due to seasonality. Northern Sonora (Caborca) should start in the next two weeks. Peruvian volume remains steady, which should continue for the next two weeks. Markets continue to be less active with the holiday rush wrapping up.

Bok Choy: EXTREME Quality is good, but supplies are still limited. The light supplies are driving the market.

Broccoli/Broccoli Crowns: EXTREME Quality is okay, but growers are seeing much lighter supplies. Insect intrusion is heavily limiting what will be harvested. Supplies are going to be limited for most growers for at least a few more weeks. Some growers are seeing insect intrusion, brown beads and premature breakdown. It has also been cold in the mornings in Yuma and that is not helping the broccoli grow. This is all limiting the acres that can be harvested. Expect to see growers holding very strict averages. Some growers are currently at the extreme trigger.

Brocolini and Sweet Baby Broccoli: WATCHLIST Quality is good, but supplies are very tight with most growers. Expect this item to be an issue throughout transition. Demand is very strong, and supplies are limited.

Brussels Sprouts: ESCALATED Quality looks very good, but some growers have tight supplies, and it is driving the market up.

Carrots: (JUMBOS, MEDIUMS and CELLOS): WATCHLIST Jumbo Carrot supplies are light, but supplies remain steady on all other sizes and packs with good Quality.

Cauliflower: EXTREME Supplies are tight, and quality is just okay but will improve once we settle into Yuma. We are seeing similar insect damage as we have in broccoli. Some growers are holding to weekly averages.

Celery: EXTREME: Quality is good supplies are okay. Growers are able to cover contract business, but they are holding to averages. There are some heat issues and insect pressures. Supplies are getting tight with the holiday and will continue to be that way into Christmas.

Corn: EXTREME Currently supply is hit or miss in the East due to transitional gaps and poor quality is prevalent due to insect pressure. Corn will be smaller this time of year as well due to less sun which typically slows the growth of the ears and produces smaller kernels. In the West, supply has improved as the desert started production, we expect that Mexico will follow soon. Quality out of the west was good.

Fennel: ESCALATED The fields are seeing lower yields and therefore there is a shortage in supply. Pricing will stay escalated until supplies improve.

KALE: Kale is escalated in some markets. Supplies are light with some growers, but quality is good.

Leeks: EXTREME Leeks are very tight right now and some growers are holding to averages. The market remains escalated and will likely stay that way throughout the year.

Garlic: New crop California Garlic has started. Quality is very good with very good demand.

Ginger: Supplies and market are steady

Green Cabbage: ESCALATED Supplies are still limited, and the quality is improving. Some growers are still prorating but things are improving. Growers are doing their best to cover but expect to see escalated pricing for the next few weeks. Relief will come once everyone is settled into Yuma and they can catch up with production.

Green Onions: Supplies are still limited but we are finally starting to see relief from these. Prices are no longer trigger and we are seeing improvements from all suppliers. Some growers may still be holding to averages but things are improving. The market is coming down.

Mushrooms: ESCALATED Supply was lighter this week, particularly on Cremini's and Ports. In the west growers from Canada to California are dealing with supply shortfalls across the entire category due to weather impacts as well as virus pressure. Supply will get tighter over the entire category as the Thanksgiving Holiday will increase over the next couple of weeks.

Napa Cabbage: ESCALATED Quality and supplies are improving but there is some insect pressure.

Parsley: ESCALATED (Italian& Curly): Supplies are improving but the light supply in some markets is driving the market. Quality is okay.

Rapini: Quality is good, but supply continues to be light. The market is strong and therefore the supplies will continue to be light.

Red Cabbage: WATCHLIST Pricing is no longer escalated. The quality is good, but supplies continue to be tight. The market remains very active, so this item will remain on the watchlist.

Spinach: ESCALATED Supplies are very tight. We are still seeing some insect damage, burn damage and inconsistent sizing. The heat has limited the acres that are being harvested. Some growers are holding too strict weekly averages and are still at the extreme trigger for probably another week.

Spring Mix: ESCALATED Supplies and quality are still limited but are improving. The fields have very low yields due to heat, insect damage, mildew and other factors. Later shelf life is starting to show some breakdown and there is some thin texture caused by the rapid growth from the heat. Some growers are still holding to weekly averages. This item only escalates when there is an industry wide issue and unfortunately, that is where we are at right now. Some growers are still at the extreme trigger, but most have dropped down in escalations. We should see relief on this item very soon.

Snow Peas and Sugar Snaps: ESCALATED Guatemalan snow pea production has seen an improvement this week and is expected to enhance further next week. However, the production of sugar snaps is declining due to adverse weather conditions. In Peru, the production of both snow peas and sugar snaps has concluded because of seasonal changes. The markets are currently very dynamic, with domestic supplies of snow peas and sugar snaps being quite restricted. Mexican production of snow peas has commenced, while sugar snaps are anticipated to be available in 7 to 10 days. Overall, market activity remains active.

Onions: ESCALATED

The onion market has stayed steady. The Northwest is continuing to ramp up volume on all colors and sizes. Size profiles continue to peak on medium and jumbos on yellows, with colossal and super colossal few and far between in the early volumes, although they are starting to improve. There is a belief that this may be the pattern for the entire season,

however, it is still early to tell. The cause of this would be the extremely hot summer they experienced here. We are still seeing reds and whites remain elevated, although they should begin to see some relief in the next few weeks. Yellows appear to have stabilized for the minute. There are still more shippers entering the market, so we will see if the added supply will provide downward pressure. White onions are beginning to soften some as well as we are seeing growers begin to build up inventory of those. The overall 'feel' of the market is beginning to take shape, and it is believed to be the most average year for the most part. We will likely see a few lows and a few highs throughout the deal. There is concern about what demand may be like as we ramp up to the election. Historically speaking, demand takes a hit due to various external factors that have happened in the last few election seasons. We are also seeing trucks tighten up, with rates beginning to increase. We do not feel that freight will go any lower than it is today as we head into Q4.

Potatoes:

We are exclusively into new crop potatoes at this point in Idaho. The market took a significant increase between last season's old crop prices and the new crop Norkotah prices at the current market. We will likely see this situation remain in effect for another few weeks until additional shippers enter the market, and inventories begin to build up. We are currently seeing a much bigger size profile than we had last year. 40ct through 70ct appear to be in good supply throughout the state, and 80s and smaller are on the tighter side. While this should differ some throughout the year as growers switch between lots, it does tell a story that the tuber counts are a lot lower this year than last year, which will mean less overall supply. We expect we will see a market dip in the short term on large size counts, but as we get into the new calendar year, we do expect to see a price increase. This should be the general pattern for next year as production and pack-outs will only worsen as we get later into the season. We anticipate that we will 'feel' this shortage as we get to about March of next year. There is concern about what demand may be like as we ramp up to the election. Historically speaking, demand takes a hit due to various external factors that have happened in the last few election seasons. We are also seeing trucks tighten up, with rates beginning to increase. We do not feel that freight will go any lower than it is today as we head into Q4.

Tomatoes: East Coast

- **Round, Romas and Snacking Tomatoes: EXTREME** Over the past few weeks, Florida, which is the primary domestic production point for tomatoes for the next several months, experienced significant impacts from Hurricane Helene and Hurricane Milton and has seen catastrophic flooding and crop loss. Growers will be assessing losses but expect markets to be extremely short for the next 5 to 7 weeks. Fortunately, we see decent production out of Quincy and Bainbridge, which is helping the current market, but will end soon. For the next several weeks, we expect to see volume out of the region at 20% or less of the normal levels. Act of God declarations have been made by several East Coast suppliers. We anticipate active markets and short availability on volume over the next 5 to 7 weeks depending on the extent of the damage done in Immokalee and Ruskin.

Tomatoes: Mexico

- **Round Tomatoes: EXTREME** Lighter numbers this week crossing from all shipping points. Large fruit is the shortest; overall volume will be at seasonal lows in general from all growing regions. We expect to see volatile markets continue. We will see flushes of fruit then tighten back up over the next several weeks. Markets will see added pressure through the Holidays as demand that would be pulling from Florida will shift West due to the devastation caused by Hurricane Milton.

- **Roma Tomatoes: EXTREME** Improving volume crossing through Otay, Nogales and McAllen this week as growers transition from Summer to Fall regions. Markets will be very active due to the losses on the East Coast and demand moving to Mexico. Quality is good.

- **Grape Tomatoes: EXTREME-** High Demand and short supply expected to keep prices well above normal throughout the holiday season. A lot of this is due to limited supply on the east coast and transition in the west. Quality is good.

- **Cherry Tomatoes and Medley Tomatoes:** Supply is tighter, and markets are firming up. Quality is good.

- **Tomato on the Vine:** Steady volume available this week.

Other Fruit:

Apples: Last year, Washington State Apple growers shipped just over 136 million boxes of Apples. This year's total is projected at 124 million. Prices will likely be higher this year and much more manageable of a crop.

Projections below:

- **Red Delicious** – 4 million down from last Season
- **Gold Delicious** – 280,000 boxes down from last Season
- **Granny Smiths** – 1.1 million boxes down
- **Fuji** – 1.5 million boxes down
- **Gala** – 3 million boxes down
- **Honeycrisp** – 5 million boxes down
- **Cosmic** – Up 2.7 million boxes.

Pears: The Northwest Pear Crop (Washington/Oregon) is substantially down from last season due to below average temps in late Feb/early March affecting bud development. The higher elevation areas in Washington were severely impacted, especially the Wenatchee Valley. The Oregon Growing Region was not affected as much as Wenatchee, Washington, but it was still impacted.

- **The Bartlett Crop** out of the Northwest shows 3.8 million shipped last season vs a projected 2.9 million this year for a 14% decrease. It's not substantial in terms of overall volume, but it's still a factor. The cold temperatures will affect the grade, so more Fancy's will be packed than normal. Because the crop is smaller, the size profile has increased by 1 to 2 sizes. Barts to finish by the end of Feb./ first part of March.
- **Anjous** report at least a 30% total decrease, or 1.85 million boxes less than last year. Also, outside of the Wenatchee Valley, there will be fancier and, for the first time in many Years, a 3rd grade anjous packed. When we start to pack Anjous – I will share pics of 3rd grade, this will be your value pear. Anjous to start the week of September 16th, and if growers make it through June I will be surprised.
- **Red Anjous** are down 7% or 47,000 boxes, so it is nothing dramatic like the others. The question on Red Anjous is whether or not we will see smaller pears such as 120/135cts. Red pears are supposed to be 1 to 2 sizes larger out of the PNW. Red pears have started with
- **Starkrimsons** and will transition into Red Anjou from November through May.
- **Bosc** are down 63% out of the great Northwest or 1.38 million boxes. This variety was mostly affected, and markets will be much higher than in previous years. Bosc has slowly started with a potential end date last January/middle of February.

Pomegranate: Good supply available this week.

Asian Pears: Peaking in volume Quality is outstanding

Tree Fruit: Mostly done for the season. Offshore fruit should arrive around Christmas.

Kiwi Fruit: Supplies are tight out of Chile and markets are firming up.

Persimmons: Active markets and quality are good on both Hachiya and Fuyu

Quince: Starting to harvest.
